

ABSTRACT OF THE DISCLOSURE

A hockey playing table includes a main body, a panel mounted on the main body, a magnetic board mounted on the panel, a disk movably mounted on the magnetic board, and a circular magnetic plate mounted on a bottom of the disk and rested on the magnetic board. Thus, the disk is floating on the magnetic board during movement by the repulsive force between the magnetic plate and the magnetic board, so that the disk is moved on the magnetic board easily and conveniently, thereby facilitating the player playing the hockey game.
